

# Landscape Review

April 2004

**Moon lighting** A huge tidal-powered moonclock, clad in translucent glass with next-generation LEDs and a stainless-steel substructure, is set to go beside the River Mersey by 2007. "It's an extremely powerful river and the lights will last for 80 years," said artist Laura Williams. She is working with Land Use Consultants, lighting firm Speirs & Major Associates and engineer Gifford on the six-storey clock.
